RESEARCH INTERESTS

My research focuses on linguistic variation and change, with the aim to study a) the linguistic mechanisms that control variation and change in language, as well as b) the non-linguistic parameters that interact with the above linguistic mechanisms.

I have been conducting qualitative and quantitative research on dialect contact phenomena, as they are realized on the phonological and phonetic levels of Modern Greek dialects, as well as on the sociolinguistic and the pragmatic function of linguistic variables.

In the last four years, I have been dealing with issues of oral corpora, organizing the first GREek Electronic Dialect Corpus (GREED), a project of the Laboratory of Greek Dialects, that I am member of.
